

1. Are all street lights in the coverage area available to install equipment on? **Yes**
2. Can you provide info on how street lights are powered? **Metered via PGE, 220v however there are some areas that are 120v**
3. Are there buildings in the coverage area that we can install on? **Yes**
4. Can you identify the fiber/Internet points of presence in the coverage area? **You'll have to check with local providers**
5. If no Fiber/Internet access locations, can you provide the closest point of presence to the area? **Check with local providers**
6. Can you provide an estimate of WiFi clients in the area that may need to be supported? Are there any special events or festivals in the area? **It fluctuates, the City does hold many events in the area throughout the year. System should be able to support several hundred clients without degradation.**
7. What type of WiFi equipment do you use in the city today? **The City used Meraki inside of our buildings, it's a close system.**
